

NOTICE TO RESIDENTS AND PROPERTY OWNERS

CEDAR HEIGHTS STANDPIPE AND BOOSTER PUMPING STATION

The City of North Bay, Engineering & Environmental Services Department (City), together with C.C. Tatham & Associates Ltd., Consulting Engineers (CCTA), are proceeding with the design of the Cedar Heights Standpipe, Booster Pumping Station and associated water/sewer main improvements. This project will improve water servicing to Nippissing University, Canadore College, and the Cedar Heights Planning Area, by implementing the Phase 1 improvements detailed in the Class EA Study Report dated October 23, 2009.

Generally, the Phase 1 improvements will include the following:

- Construction of a new booster pumping station (BPS) at a higher elevation, and with a larger capacity, to replace the existing Canadore BPS on Gormanville Road.
- Construction of a water storage tank (elevated or standpipe) south-east of the intersection of Laroque Road and Delorme Pit Road.
- Replacement of existing water mains and/or installation of new water mains from the existing Canadore BPS to the water storage tank on Laroque Road, and west along Cedar Heights Road.
- Installation of a sewer main on Cedar Heights Road, from Laroque Road west to the dead-end of Cedar Heights Road.

Topographic surveying and geotechnical investigations of the water/sewer main routes and the BPS and water storage tank sites will start at the end of October 2010. The design is scheduled to be completed by May 2011. Construction is expected to commence in June 2011 and to be completed by the Spring of 2012.

Updates will be provided by additional notices as the project progresses. Should you have any questions, comments or require additional information in the interim, please contact CCTA's Project Manager at the address below.
